Association of Certified Meteorologists

Choose with Confidence

Consulting Members of the Association of Certified Meteorologists (ACM) are all American Meteorological Society's Board Certified Consulting Meteorologists (CCM).

CCMs demonstrate exemplary qualities of character and devotion to high professional standards.

CCMs are considered experts in the application of weather information to a host of practical challenges ranging from specialized forecasts to engineering design support and expert testimony on weather-related court cases.

AIR QUALITY MODELING AND METEOROLOGY

Weather directly influences the impact of emissions on the public. Our experts have decades of experience emission modeling, permitting regulations, and analyzing data related to toxic exposure.

AVIATION METEOROLOGY

Aviation meteorology involves detailed understanding of the way weather interacts with aircraft and flight. Our experts have experience studying the variety of ways meteorology phenomenon impacts aviation.

EDUCATION

Our expert meteorologists have additional training to advance the quality of education through state-of-the-art teaching strategies and have a passion for educating the public about the role meteorology plays in your industry.

FORENSIC METEOROLOGY

In order to understand the weather and its impact on a specific incident, you need access to a complete set of the correct data with an accurate analysis from an objective perspective.

MARINE METEOROLOGY

Insightful application of marine meteorology can assist clients to improve mission success by appropriate interpretation of readily available products and information.

SATELLITE AND REMOTE SENSING

Expertise in instrumentation and data collection procedures, such as calibration, network development, installation, and management. Our experts understand and help construct this network.

WEATHER CLIMATE ANALYTICS

Understanding climate variability helps prepare for extreme weather and understanding how past weather has impacted your industry can give you a competitive edge when planning. Expertise in instrumentation and data collection procedures, such as calibration, network development, installation, and management.

PERSONALIZED FORECAST

Weather has a significant impact on day to day activities. Cancelling events, delaying travel, and halting production is never an easy decision to make, so reliable, personalized forecasts can give you confidence when making the tough calls.
